ABSTRACT

Device for treatment of a gas flow having at least one body
(3) that is adapted to cause a conversion in the composition
of the gas. The device is characterized in that the body (3)
has a modular construction comprising a plurality of sec-
tions (26, 26', 27, 27', 36) with different internal structures
that allow gas to flow through the section, and that the
sections (26, 26', 27, 27', 36) are arranged so that at least a
portion of the gas flows through at least two sections with
different internal structures during operation of the device.
